

Are Pigeons, Starlings, and Gulls messing up your Work Place?

The Birdman is a natural solution to eliminating problem birds species from perching and nesting in buildings. We are a preventive option to pesticides and other harming means to deal with pest birds.

With the aid of specially trained captive bred raptors, primarily Harris hawks. We can virtually clear indoor and outdoor structures of pigeons, starlings and other problem birds residing there. For problem pest birds on the top and sides of buildings we employ the use of falcons, Peregrine, Hybrids and Saker falcons. The aerial pressure from these awesome predators drive roosting birds such as gulls, pigeons, sparrows and starlings from structures.

The genetically coded predator-prey fear instinct is the primary reason effectiveness in controlling unwanted pest bird species.
